

→ Release of Apple iPhone App Version 1.0

Introducing MoneyDesktop for iPhone Version 1.0

What have we been up to?

We know how important it is to access your financial information on the go. So, we have been working with our developers to debut MoneyDesktop Mobile Access for iPhone. Now, you can access MoneyDesktop's PFM software from any iPhone absolutely free.

Secure Access: Unique Authentication. Password Protected

When it comes to mobile devices, we understand that powerful security is essential. We require every mobile user to authenticate their phone online with their existing MoneyDesktop account. A temporary pin, specific to the individual and valid for only ten minutes, will allow them to activate the iPhone application. When a secure connection has been established, the user can customize a pin to prevent any unauthorized access. If the phone is ever lost or stolen, the user can deactivate the App online from their MoneyDesktop account.

The accounts and transaction sections allow users to see all of their aggregated account balances and transactions on the go. You now have the ability to access up to date financial information right on your iPhone.

Budgeting on the MoneyDesktop iPhone app makes it easy for you to see right where you are at with your spending. By providing up to date and automated budgeting on your iPhone, you can now better manage your finances.

More to come with our mobile applications

We expect to release many more updates with additional features for our iPhone application. We will also work to develop an Android application, mobile web access and also an iPad application.
